Abstract (en)
[origin: CN113320800A] The invention relates to a can (1), in particular for a cosmetic product (4). The can comprises a base (21) configured to contain the product, and a lid (61) configured to be reversibly screwed onto the base (21) along a screwing axis (V). The can (1) further comprises an intermediate piece (8), and the intermediate piece (8) ensures that the cover (61) is pivotally mounted on the base (21) along an axis (P) transverse to the screwing axis (V), and the cover (61) comprises at least one first side skirt (612), referred to as a first interface wall, positioned opposite a side ring (81), referred to as a second interface wall, of the intermediate piece (8). According to the invention, one of the interface walls is provided with at least one helical groove (84) in which a counterpart (68) formed on the other of the interface walls engages by sliding between a lower position and an upper position, so as to be pivotable.
