Abstract (en)

[origin: WO2020089546A1] Assembly formed by an insert (3) and an overmoulding device (1) comprising a lower mould part (10) and an upper mould part (11) which are able to move relative to one another between: an open position which is suited to the positioning and removal of a glazing (2) and of the insert (3) to be overmoulded, and a closed position in which the two mould parts (10, 11) delimit at least one cavity (12, 13) for the injection of the overmoulding material, the said device (1) being characterized in that the lower part (10) comprises a receiving housing (60) which is suited, because of its shape that compliments that of a referencing member (31) belonging to the insert (3), to forming a limit stop for the said member (31) in a direction of insertion of the insert, and to immobilizing the said member (31) along a vertical axis.
