Abstract (en)

[origin: EP3647482A1] Garment care system (10) comprising a base unit (20), a hand held unit (30) and a hose cord (44); the base unit (20) is adapted to provide a first driving signal (V1) which reflects an operating state of the garment care system; the hand held unit (30) comprises output means (36) for providing visual or audible output information reflecting said operating state; and a unit (38) which comprises at least one sensor (42) and/or at least one user input device (40). The hose cord (44) comprises a single communications wire (46) for carrying said first driving signal (V1) from the base unit (20) to the hand held unit (30) for driving the output means (36), and for carrying the input signal from the hand held unit (30) to the base unit (20).
