Abstract (en)
[origin: CA3115666A1] Disclosed is a lifting plug (10) for lifting a tubular column in a gas and/or oil well, the lifting plug being a one-piece component capable of being manipulated by a jaw of an oil platform elevator, the plug comprising a body (12) to be screwed (13) onto the tubular column, this body comprising two outer flanges (14, 15), an upper flange (14) and an intermediate flange (15), the flanges being such that the jaw of the elevator can be arranged between these two flanges, the upper flange forming a bearing shoulder (19) for the jaw to bear on and the intermediate flange comprising a bore (24) for manipulating the plug allowing the insertion through the body of a pin emerging at two different points of the intermediate collar, the plug thus being capable of being rotated by the pin while remaining engaged in the jaw.
