Abstract (en)

[origin: WO2020089289A2] The present invention relates to the digitalization of images, and more specifically to a system for activating the digital acquisition of an image with a digitalization device coupled to an optical instrument such as, for example, a microscope, a telescope, a retinograph or a colposcope, which is activated with the foot. Furthermore, the digitalization device is coupled to the optical instruments by means of an adapter element which may be able to adapt to different sizes or shapes of such devices and instruments, the adapter having a simple manufacturing process, and a reduced manufacturing cost.
