Abstract (en)  
A foot (106) for a pump (150). The foot (106) includes a base body (110), a coupling structure (112) and a front panel (114). The coupling structure (112) is coupled to the base body (110). The coupling structure (112) allows the foot (106) to pivotally move between a first stable position and a second stable position. The front panel (114) is coupled to the coupling structure (112). The front panel (114) is actuated by a user to move the foot (106) between the first stable position and the second stable position. The foot (106) is characterized in that it includes a first arm, a second arm and a third arm. The second arm is coupled to the base body at a second end. Further, a third arm is positioned to actuate both the first arm and the second arm. Moreover, the first arm, the second arm and the third arm are cooperatively movable relative to each other between the first stable position and the second stable position, such that the front panel is adapted to actuate the third arm to move against the first arm and the second arm. Thereby in the first stable position and the second stable position of the foot (106) the front panel (114) is adapted for the pump (150) to rest on it.
