Abstract (en)

[origin: WO2020096617A1] A system for storing food products at predetermined temperatures includes a food product receiving holding cabinet, a first storage bin in the holding cabinet for receiving a tray, a temperature control device that is in thermal communication with the tray, and a controller that transfers a selected timer by touching a user interface of the holding cabinet, thereby designating the selected timer for transfer to be associated with the first storage bin.
