Abstract (en)
[origin: WO2020094273A1] The invention relates to a method for producing a data page for a book-like document, to a data page and to a device for producing such a data page, in which a data carrier (20) and a tab (23) are oriented with respect to one another such that the tab (23) and the data carrier (20) form an overlapping area (30) and overlap with one another, in which the data carrier (20) and the tab (23), with their overlapping area, are positioned between a first tool (52) and a second tool (53) that are oriented toward one another, and in which the data carrier (20) and the tab (23) are welded to one another in the overlapping area (30) by the tools (52, 53), wherein the tab (23) and the data carrier (20) are connected to one another by way of friction welding in the overlapping area (30), in which the first or the second tool (52, 53) is excited by way of an oscillating translational relative movement the movement direction of which is oriented parallel to the direction of extent of the data page (20) or of the tab (23).
