Abstract (en)
[origin: WO2020094769A1] The invention relates to a pallet made of plastic, having a cover plate (2) for accommodating articles and at least two, preferably three, runners (4) which are arranged beneath the cover plate, are arranged parallel to one another and parallel to a pallet periphery (6), each runner having a runner-standing surface (12), at the ends of which is arranged a respective runner-supporting member (10) in the manner of a supporting foot, which is angled in the direction of the cover plate from the runner-standing surface, wherein the runner-standing surface (12) is spaced apart from the cover plate, and connected in a releasable manner thereto, by the runner-supporting members (10) and supporting feet (8) arranged therebetween, wherein the runners (4) are each formed from at least two, preferably in each case single-piece, runner elements (4a, 4b) which can each be connected in a releasable manner to the cover plate (2) and, in the position in which they have been mounted on the cover plate, together form a runner (4) of the pallet. According to the invention, the runner elements are equipped with reinforcing elements which are provided in a simple manner within each runner element.
