Abstract (en)

[origin: WO2020094735A1] The invention relates to a lifting device fastening (30) and a lifting device (1) for wind turbines with a climbing aid (41) arranged on the inner wall of the tower (40) of the wind turbine. The lifting device fastening (30) comprises at least two mountings (31), which are individually secured to the climbing aid (41) at at least two different heights at climbing aid anchoring points (42), and a vertical lifting device support brace (32), which can be attached to the mountings (31) in a parallel orientation to the climbing aid (41). The lifting device (1) comprises a fastening element (2) and an attachment element (20) for attaching a lifting tool, wherein the fastening element (2) and the attachment element (20, 20') are connected by a row (10) of vertically extending segments (11), and segments (11) lying adjacently to one another are pivotally connected together on a horizontal plane. The attachment element (20, 20') can be moved and oriented freely on a horizontal plane relative to the fastening element (2), and the fastening element (2) is attached to a lifting device fastening (30) according to the invention.
