Abstract (en)

[origin: WO2020094390A1] A plug adapter for connection to a solenoid valve that is in particular already installed in a motor vehicle, having a plug connection for receiving an electrical control signal from a controller of the motor vehicle in order to operate the solenoid valve, wherein the plug adapter comprises a solenoid valve connection for releasably coupling the plug adapter to the plug connection of the solenoid valve, wherein the solenoid valve connection and the plug connection are matched to one another in terms of plug shape and electrical signal transmission, an electronic component, in particular a microcontroller, for processing an electrical output signal in order to operate the solenoid valve, wherein, in the state in which the plug adapter is plugged onto the plug connection, an electrical connection is created between the electronic component and the solenoid valve via the solenoid valve connection.
