Abstract (en)

[origin: WO2020094360A1] The invention relates to a brake pad mounting for a disc brake of a rail vehicle, which brake pad mounting has a pad holder and at least two brake pads (3a, 3b) held in a locked manner on the pad holder, wherein the pad holder has a pressure plate having a guide channel which extends in the longitudinal direction of the pad holder and in which a guide web (32) arranged on a rear side (31a) of the brake pads (3a, 3b) that faces the pressure plate is displaceably held, wherein the guide web (32) has a receiving channel (5) extending in the displacement direction (x), in which a spring rod (6) is received, wherein the spring rod (6) has a plurality of spring elements (62), which are arranged in such a way that, when the spring rod (6) is inserted into the receiving channel (5), a torque acts on the brake pads (3a, 3b) at right angles to the displacement direction (x).
