Abstract (en)

[origin: WO2020094691A1] The invention relates to a method for determining a target (36), in which method an image (28) illustrating the target (36) is specified and a target identification unit (18) identifies the illustrated target (36) as such from image features of the image (28) and predefined classifiers (56). According to the invention, in order to determine targets reliably, the target identification unit (18) determines new classifiers (66) from the image (28) using knowledge of the target (36), by means of which classifiers the target (36) is identifiable as such with a greater identification accuracy than with the classifiers (56) used for identification.
