Abstract (en)

[origin: WO2020094558A2] The invention relates to a device having a processing tool for processing at least one work area of an object. Arranged on the processing tool are an image-acquisition device for generating at least one image of the at least one work area, and at least one sensor for generating sensor data during the processing of the at least one work area. The device comprises an evaluation unit, which has a calculation model, which was trained by means of machine learning on the basis of images of work areas and sensor data and with which the at least one work area and/or a situation during the processing of the at least one work area is identifiable. The invention further relates to a method for processing at least one work area of an object.
