Abstract (en)
[origin: US2020146361A1] In an aspect, there is provided an apparatus which may include a cartridge and a vaporizer body. The cartridge may include a cartridge body defining a reservoir configured to contain vaporizable material, a vaporizing assembly positioned within the cartridge body. The vaporizer body may include a receptacle configured to receive at least a portion of the cartridge, and control circuitry comprising at least one processor and at least one memory disposed within the vaporizer body, the at least one memory including instructions which when executed cause operations comprising: storing an event indicative of detection of an insertion of the cartridge into the vaporizer body; requesting, from the cartridge, cartridge information; receiving, in response to the request, the cartridge information stored at the cartridge; and configuring, based at least in part of the received cartridge information, the vaporizer device for vaporizing of the vaporizable material.
