Abstract (en)

[origin: WO2020094327A1] The invention relates to a method for producing a connector part (22) for electrical installations, in particular for an on-board electrical system of a motor vehicle, comprising the steps of: deep-drawing a sheet blank in order to produce a sleeve (2) having a first end region (6) and a second end region (10), the first end region (6) having a base (8), and the second end region (10) being open; deforming, in particular compressing, the second end region (10) in order to create a tab (14) and introducing a through-hole (20) in the tab (14). The invention also relates to a connector part (22) for electrical installations, in particular for an on-board electrical system of a motor vehicle, and to a connection of between a connector part (22) according to one of the preceding claims and a cable (24) formed from a plurality of wires (26) or litz wires.
