Abstract (en)

[origin: EP3878768A1] The platform comprises a first and a second pair of parallel longitudinal profiles (2, 3) attached to one another by a plurality of tubular profiles (4) orthogonal to them and of a height similar to the width thereof, such that said first and second pair of parallel longitudinal profiles (2, 3) are attached to one another, in parallel, by first attachment profiles (5). Fixed in the orthogonal position on the external lateral face of the external profile of each of the pairs of parallel longitudinal profiles (2, 3) are at least a third and a fourth pair of parallel profiles (6, 7) attached by respective second attachment profiles (8) in proximity to the free end thereof. The platform also comprises elements in the form of a wedge (9) with a protrusion (10) with a polygonal section on its external lower face.
