Abstract (en)
[origin: EP3879200A1] The invention relates to an electric radiator (1) for heating a room. The radiator (1) comprises a first electric heating element (H1) and a second electric heating element (H2) both electrically connected in parallel to the electric power source 3. A temperature limiter (TL1) is provided for temporarily switching off the second electric heating element (H2) while maintaining the electric power flow to the first electric heating element (H1).
