Abstract (en)
[origin: WO2020099066A1] The invention relates to a rehabilitation device (1), having a stand (2), a lifting column (3) which is secured to the stand (2), a lifting slide (4) which is mounted on the lifting column (3) in a vertically-adjustable manner and which can be moved vertically automatically by a first drive of the rehabilitation device (1), a base arm (5) which is mounted on the lifting slide (4) in a pivotal manner about a first vertical rotational axis (D1) and which is to be pivoted about the first vertical rotational axis (D1) in an automatically driven manner by a second drive of the rehabilitation device (1), a front arm (6) which is mounted on the base arm (5) in a pivotal manner about a second vertical rotational axis (D2) and which is to be pivoted about the second vertical rotational axis (D2) in an automatically driven manner by a third drive of the rehabilitation device (1), a connection piece (7) which is mounted on the front arm (6) in a freely rotatable manner about a third vertical rotational axis (D3), and a body part support (8) which is mounted on the connection piece (7) in a tilttable manner about a fourth horizontal rotational axis (D4).
