Abstract (en)
[origin: WO2020102323A1] The present invention relates to a pharmaceutical composition comprising at least one liposome and a therapeutic agent for treating a disease due to reduced bone density or cartilage loss with a high drug to lipid ratio and encapsulation efficiency. The pharmaceutical composition improves the pharmacokinetic profile and sustains the release of the therapeutic agent. Also provided is the method for treating a disease due to reduced bone density or cartilage loss using the pharmaceutical composition disclosed herein.
