Abstract (en)

[origin: CA3119571A1] The invention relates to a coupling device (2) for coupling two skates, characterized in that it comprises a first attachment module (6) and a second attachment module (6'), each one being designed to be attached to a skate and comprising a body (7) between the two attachment modules (6, 6'), said body (7) allowing at least a degree of freedom in translation between the two attachment modules (6, 6'), the distance between the two attachment modules (6, 6') being free between a predetermined minimum distance and a predetermined maximum distance, and said body (7) permitting a removable connection between the two attachment modules (6, 6').
