Abstract (en)  
[origin: WO2020099085A1] The invention relates to a device (1) for bending rod-like workpieces (25), comprising a base stand (2), on one end of which a bending head (5) is rotatably mounted about an axis of rotation (X) and has two bending tools (9, 10) for bending in different bending directions, which bending tools are mounted on the bending head on opposite sides, and comprising a feed carriage (3), which can be moved relative to the bending head (5) in a feed direction (v) on the base stand (2) and carries a tube clamp (19) and by means of which a workpiece (25) retained by the tube clamp can be fed to the bending head (5) for processing, wherein a pivot lever (18) is articulated to the feed carriage (3) on the front face of said feed carriage facing the bending head (5), one end region of said pivot lever being rotatable about an axis of rotation (Y) parallel to the feed direction (v) of the feed carriage (3) and the other end region of said pivot lever being provided with the tube clamp (19), and the pivot lever having at least one pivot position as a working position for feeding the workpiece (25) retained by the tube clamp (19) to the bending head (5).
