Abstract (en)
[origin: WO2020099305A1] The invention relates to a production device for additively manufacturing three-dimensional components by the layer-by-layer application of a construction material by means of at least one coating unit (13) and spatially selective solidification of a construction material by means of at least one irradiation unit, comprising a process chamber (17) having at least one heat-reflecting apparatus, in particular heat-reflecting layer (20a, 20b), which shields at least one portion of a surface within the process chamber (17).
