Abstract (en)
[origin: WO2020099032A1] The invention relates to a charging system (100, 200) for electric vehicles (110), comprising a plurality of charging stations (104, 106, 206), at least one storage module (116, 216), which is at least designed to store charging station position-dependent charging curve characteristics, and at least one charging curve determination module (114, 214) which is designed to determine a charging curve for charging an electric vehicle (110), which is connected to a first charging station (104, 106, 206) of the plurality of charging stations (104, 106, 206), on the basis of position information of the first charging station (104, 106, 206) and the stored charging station position-dependent charging curve characteristics.
