Abstract (en)

[origin: WO2020099994A1] The invention relates to a plastic pallet (1) comprising an upper part (2), which is provided with outer (4) and central (41) female foot parts, and runners (3, 3'), which are provided with outer (5) and central male foot parts (51). When plugged together with the female foot parts (4, 4'), the male foot parts (5, 5') form foot elements (8), and the female foot parts (4, 4') of the upper part and the male foot parts (5, 5') of the runners (3, 3') can be secured by means of a snap-fit connection (6). The female foot parts (4, 4') have an outer wall (7) which surrounds their respective male foot parts (5, 5'). The outer wall (7) of the outer female foot part (4) extends over the entire height of the outer male foot part (5) such that the outer male foot parts (5) of the runners (3, 3') can be completely slid into the outer female foot parts (4) of the upper part (2) in such a manner that the outer wall (7) of the outer female foot part (4) together with the runner (3, 3') forms a support surface (9).
