Abstract (en)

[origin: WO2020099309A1] The invention relates to the use of a curable composition which contains at least one polyether having blocked hydroxyl groups as the plasticizer on at least one alkaline substrate. The curable composition is storage stable, easy to handle, highly resilient after curing, and does not display a tendency to separate or migrate. Said composition allows resilient adhesive bonding, sealing or coating of alkaline substrates, such as in particular fresh or green concrete or cement mortar, without the occurrence of intrusive odours caused by the saponification of the plasticizer.
