Abstract (en)  
The present disclosure relates to a costume hanger, and more particularly, to a costume hanger including: a head; a main body having one end connected to one end of the head; a connection portion having one end connected to the other end of the main body and connecting the main body and a pole to each other; and the pole having one end connected to the other end of the connection portion and passing through a hole formed in the costume, wherein the main body and the pole are positioned to be spaced apart from and face each other by a predetermined distance, and the main body and the pole are extended upward from the connection portion, respectively, based on a direction defined as the costume hanger is suspended in the air by the head. In this manner, the costume hanger may maximize efficiency of space utilization when storing a costume, and also reduce damage to the costume by maintaining a shape of the costume when storing the costume.
