Abstract (en)

[origin: CN113397429A] The invention relates to a floor nozzle (1) for a vacuum cleaner (2), the floor nozzle (1) has a bottom side (6) with a suction opening (7) through which dirt is sucked from the floor during operation. The suction opening (7) is delimited in the direction of movement (5) of the floor nozzle (1) by two opposite edges (9, 10), at least one of the two edges is toothed. As a result, a higher comfort and at the same time a better cleaning effect are achieved, that is, in at least one of the edges (9, 10), the gullets (15) directed away from the suction opening (7) protrude to the greatest extent in the height direction (11) and thus lie in a contact plane with the flat floor.
