Abstract (en)
[origin: WO2020104938A1] The present invention relates to an end piece (200) arranged to be detachably fixed to a bar, the end piece (200) comprising: - a groove (22) intended to house said bar; - a rotating part (10) able to pivot about an axis (19) parallel to the bar between a locking position, in which the rotating part (10) prevents the bar from leaving said groove (22), and a release position, in which the rotating part (10) allows the bar to be respectively introduced into or extracted from the groove (22); - a locking mechanism (170, 16) arranged to block the rotation of the rotating part (10). This end piece (200) can be handled by the user, who can fix it to a bar and detach it from the bar without requiring any tooling.
