Abstract (en)

[origin: WO2020104742A1] The invention relates to a system that interacts with an occupant of a motor vehicle, comprising: - a measuring device comprising at least one sensor arranged to capture at least one parameter relating to the occupant of said vehicle, - an on-board processing unit using an evaluation model for the emotional state of the occupant, said processing unit being arranged to receive said parameter and to define a data item representative of the emotional state of said occupant using the model, - the representative data corresponding to a point in a three-dimensional space for characterising the emotional state of the occupant, and - at least one actuator configured to activate at least one multi-sensory stimulus for interaction with the occupant, said stimulus allowing the emotional state of said occupant to be altered.
