Abstract (en)

[origin: WO2020106868A2] A system for and method of shipping items is provided. The method includes adhering a package to an inner surface of a shipping case, thereby inhibiting movement of the package relative to the shipping case. The method includes wrapping one or more item with a sacrificial layer, such as shrink wrap, stretch wrap, paper, or the like, thereby creating a tight barrier of the package. The system includes one or more conveyor system and one or more adhesive applicator for automating the methods of the present invention. After adhesive is applied to at least one of a first surface of the package and the inner surface of the shipping case, the package is placed into the shipping case and the shipping case is moved to a closed configuration, thereby defining a void surrounding all but the first surface of the package.
