Abstract (en)

[origin: WO2020104622A1] The invention relates to a door fitting (1) having a handle (10) which can be locked on one side, at least one rose (11) for contact with a door leaf, and a spindle element (12) for forming an operative connection to the closing mechanism of a lock unit fitted into the door leaf, an adapter element (13) being fitted in a neck section (14) of the handle (10) and being held on the spindle element (12). According to the invention, to create a simple design of a handle which can be locked on one side, a locking means (15) is held in or on the neck section (14) of the handle (10), which locking means can be brought by manual actuation into a blocking position in which the handle (10) can be rotationally blocked against the rose (11) by means of the locking means (15).
