Abstract (en)
[origin: WO2020106240A1] The present invention relates to a refrigerator (1) comprising a fresh food compartment (2) wherein the foodstuffs to be cooled are placed; an evaporator (3) which is disposed on the rear wall of the compartment (2) and which provides the cooling of the compartment (2); a radial fan (4) which enables the air to be passed over the evaporator (3) and circulated in the compartment (2); a cover (5) which is placed in front of the evaporator (3) in the compartment (2); a plurality of blowing holes (6) which are provided on the cover (5) and which enable the cooled air to be delivered into the compartment (2), and a plurality of flow paths (7) which are provided between the cover (5) and the evaporator (3) and which guide the cold air blown by the fan (4) to the blowing holes (6) and wherein a container (12) containing foodstuff at high temperatures placed onto a shelf in the compartment (2) is quickly cooled.
