Abstract (en)

[origin: WO2020104172A1] The present invention relates to a cooling device (1) comprising at least one body (2) wherein the items to be cooled are placed; at least one door (3) which provides access into the body (2); at least one main pin (4) and at least one hinge (5) which are fixed to the door (3), which enable the door (3) to be attached to the body (2) and whereon the door (3) is mounted so as to rotate therearound; and at least one adjustment mechanism (6) with one end being accessible from the outside whereon the main pin (4) is seated, which serves as a lever when a force is exerted from the outside in a manner to move upwards/downwards in the vertical axis, thus enabling the main pin (4) and the hinge (5) to stop at the desired position and if required, enabling the position of the door (3) on the body (2) to be changed by being actuated.
