Abstract (en)  
[origin: WO2020104395A1] A cable management apparatus is provided to clamp a cable. The apparatus includes a jacket clamp body (110) configured to support a cable (30). The jacket clamp body (110) includes a jacket seat portion (220) on which a jacket (34) of the cable (30) is seated. The jacket clamp body (110) further includes a cavity (230) configured to at least partially receive a jacket mount device (112). The jacket mount device (112) includes a jacket strap (304), a strap holding element (306), and a pair of strap slots (240). The jacket strap (304) is configured to fasten the jacket (34) on the jacket seat portion (220). The strap holding element (306) is configured to hold the jacket strap (304) when the jacket strap (304) fastens the jacket (34) on the jacket seat portion (220). The strap slots (240) are in communication with the cavity (230) and allow opposite non-loop portions (324) of the jacket strap (304) to pass there through and extend into the cavity (230) while a loop portion (322) of the jacket strap (304) extends above the jacket seat portion (220) and surrounds the jacket (34) to fasten the jacket (34) on the jacket seat portion (220).
