Abstract (en)  
[origin: EP3885520A1] Disclosed are a vehicle and a controlling method and device therefor. The controlling method includes: acquiring a first distance between a door of the vehicle and an obstacle in an environment where the door is located; determining a target controlling mode of the door according to a first target distance interval to which the first distance belongs, wherein controlling modes of the door include a fully automatic mode, a semi-automatic mode and an assistive mode; and controlling the door according to the target controlling mode. By using the method, in the controlling of the door, different controlling modes are adopted according to the distance between the door and an obstacle, and the door is controlled according to the corresponding controlling mode, whereby the door can be opened or closed safely, and the door can be controlled to be opened or closed in different manners, which improves the comfort.
