Abstract (en)
[origin: EP3886128A1] An electrical switching device comprises a stationary member (3), a mobile member (1) which is displaceable between a closed position in which a contact pad (2) of the mobile member (1) is in electrically conductive contact with the stationary member (3), and an open position in which the electrically conductive contact does not exist, and an actuator (8, 18) for displacing the mobile member (1) from at least a first one of the closed and open positions to the second one. An acceleration sensor (6) is coupled to the mobile member (1) so as to sense an acceleration caused by the actuator (8, 18) displacing the mobile member (1).
