Abstract (en)

[origin: WO2020109688A1] Disclosed is a handling device (1) that allows a person to handle a piece of equipment that needs to be inserted at an angle into a system. This device (1) comprises a support part (2) suspended in the vicinity of the system and to which there is coupled a fastening assembly (4) to which the equipment is temporarily fastened in a stand-by position, and a curvilinear rail (3) fixedly attached to the fastening assembly (4) and comprising an operating handle (5). The support part (2) comprises a curvilinear slide (7) in which the curvilinear rail (3) is slidingly mounted, such that, when the person slides the latter (3) by means of the operating handle (5), it is moved from an initial position to an end position in which the equipment is in an offset and inclined position suitable for insertion at an angle into the system.
