Abstract (en)

[origin: WO2020109673A1] A dispensing device comprising: - a dispensing pipe configured to convey a liquid between a supply source and a vessel, the dispensing pipe comprising a closure system having an open state and a closed state, - an analysis system comprising an analysis chamber and an odour sensor, - a central electronic system (22) capable of placing the closure system in the open state if an odour signal delivered by the odour sensor matches the odour of the liquid intended to fill the vessel, and placing the closure system in the closed state if an odour signal delivered by the odour sensor does not match the odour of the liquid intended to fill the vessel.
