Abstract (en)
[origin: WO2020109065A1] A method for producing a catalytic material of an electrode for electrochemical reduction reactions, said material comprising an active phase based on at least one group VIB metal and an electrically conductive support, which method is carried out according to at least the following steps: - a step of bringing said support into contact with at least one solution containing at least one precursor of at least one group VIB metal; - a step of drying at a temperature below 250 °C, without subsequent calcination step; - a step of sulfurization at a temperature between 100 °C and 600 °C.
