Abstract (en)
[origin: WO2020109682A1] Method for treating soil (S), characterised in that it comprises the steps in which: a tube (10) is provided, a borehole (F) is made which has a drilling depth, the tube is positioned in the borehole at a first predetermined depth (P1) which is less than the depth of the borehole, at least one first sealing element (30) is introduced into the borehole at a second predetermined depth (P2) between the first predetermined depth and the depth of the borehole, the at least one first sealing element being configured to seal the borehole in order to define an injection zone (34), then an injection fluid is injected into the injection zone while performing a step of removing the debris located between the tube and the side wall of the borehole.
