Abstract (en)
[origin: WO2020108994A1] The invention relates to a device for injecting water into a combustion chamber or into an intake tract of an internal combustion engine, comprising a rail (1) and at least one injection valve (2) connected to the rail (1), the connection being produced by means of a rail cup (3), which surrounds the injection valve (2) at the rail-side end of the injection valve. According to the invention, the injection valve (2) has a feed channel (4) open toward the rail (1), in which feed channel at least some portions of an insert (5) are received in order to reduce the feed cross-section.
