Abstract (en)
[origin: WO2020109330A1] The invention relates to a food preparation system (10a) with at least one output unit (12a) and at least one control unit (14a) which is designed to provide guidance through at least one recipe in order to prepare at least one meal of at least one ingredient composition, which defines a totality of all of the ingredients provided for preparing the meal, via the output unit (12a). The aim of the invention is to provide a generic system with improved properties with respect to operating comfort. This is achieved in that in at least one operating state, the control unit (14a) automatically initiates at least one adjustment to at least one chronologically subsequent process of the recipe during at least one recipe step (16a) of the recipe on the basis of an adjustment to the ingredient composition.
