Abstract (en)

[origin: WO2020108919A1] The present invention relates to a cooling device (1) comprising a body (2) wherein the items to be cooled are placed; a door (3) which provides access into the body (2), and a storage container (4) wherein the items to be stored are placed, and the storage container (4) comprises a first receptacle (5) which forms the base of the storage container (4), a second receptacle (6) on the first receptacle (5) which moves in the vertical axis telescopically with respect to the first receptacle (5), a cover (7) which covers the second receptacle (6) and which forms the ceiling of the storage container (4), and a separator (8) which is provided between the first receptacle (5) and the second receptacle (6) and which partially separates the first and second receptacles (5 and 6) from each other. By means of the separator (8), plants with long bodies such as parsley, mint, etc. are enabled to stand upright and the user is enabled to access the leaves reaching into the second receptacle (6) more easily and more efficiently.
