Abstract (en)
Hydrofoil for transport over water, which comprises a hull (2) extended along a main extension axis (X), at least one appendage (4), mounted on said hull (2), a movement apparatus (5) mechanically connected to the appendage (4) in order to move it and comprising at least one first actuator member (6), actuatable for rotating the appendage (4) around a first rotation axis (Y) substantially parallel to the main extension axis (X); the movement apparatus (5) also comprises a support body (7) rotatably constrained to the hull (2), actuatable to rotate around a second rotation axis (Z) and comprising a first hinge member (8) carrying, rotatably mounted thereon, the appendage (4), a second actuator member (9), actuatable for rotating the support body (7) around the second rotation axis (Z), connection means (10), between the second actuator member (9) and the support body (7) adapted to move the support body (7) around the second rotation axis (Z) following the actuation of the second actuator member (9).
