Abstract (en)
[origin: EP3890070A1] The present application provides a silicon-oxygen composite negative electrode material and method for preparation thereof and lithium-ion battery. The silicon-oxygen composite negative electrode material comprises a silicon-oxygen composite negative electrode material comprising SiO_x , non- $\text{Li}_2\text{Si}_2\text{O}_5$ lithium-containing compound, and $\text{Li}_2\text{Si}_2\text{O}_5$ lithium-containing compound; $0 \leq x \leq 1.2$. The preparation method comprises: mixing a first silicon source with a reducing lithium source and roasting, to obtain a composite material containing a non- $\text{Li}_2\text{Si}_2\text{O}_5$ lithium-containing compound; the composite material containing the non- $\text{Li}_2\text{Si}_2\text{O}_5$ lithium-containing compound is fused with a second silicon source and then subjected to heat treatment to obtain a silicon-oxygen composite negative electrode material. The silicon-oxygen composite anode material provided by the present application is coated with $\text{Li}_2\text{Si}_2\text{O}_5$, solving the problem in the prior art of a negative electrode material producing strong alkaline or easily soluble by-products in water after pre-lithiation and affecting subsequent processing.
