Abstract (en)  
[origin: CA3121587A1] The invention relates to a carrying arrangement (1) having an accommodating structure (10) for accommodating a baby or infant (B), wherein the accommodating structure (10) has an inner side (S1) and an outer side (S2) and is designed such that at least one region of the rear side (B1) of a baby or infant (B) can be accommodated and/or supported in the accommodating structure (10), and having a harness system (40) for fastening the accommodating structure (10) on a person (P). The accommodating structure (10) has a central part (11) comprising an upper end (12), a lower end (13), a left-hand side edge (14) and a right-hand side edge (15) and also has a left-hand length of cloth (31) and a right-hand length of cloth (32), wherein, in the region of the upper end (12), the central part (11) has a left-hand pull-through tunnel (16), through which the left-hand length of cloth (31) is guided, and a right-hand pull-through tunnel (17), through which the right-hand length of cloth (32) is guided. The region of the upper end (12) of the central part (11) is mounted such that it can be displaced, by way of the left-hand and right-hand pull-through tunnels (16, 17), along the left-hand and right-hand lengths of cloth (31, 32).
