Abstract (en)

[origin: WO2020115399A1] The invention relates to a device (1) for packaging and dispensing a product, comprising a preassembled inner unit (25) to be mounted in a hollow body (2), with a dispensing head (6) which is surrounded by an upper connector (17) such that the body can be secured detachably. The inner unit comprises a reservoir, and the head sealingly closes the opening of said reservoir. A peripheral holder ring (24) of the inner unit holds the reservoir and the head together. The connector (17) connects to the body by means of a locking action achieved by the relative pivoting between the connector (17) and the body (2), without interference with the ring (24). An actuating portion of a dose metering pump of the head is accessible on the top via a duct of the connector, while a tubular outer portion (107) of the connector covers the zone where it is secured to the body, axially extending an outer wall of said body.
