Abstract (en)

[origin: WO2020169267A1] The invention relates to an arrangement and a method for transferring data from or into a hole in the ground, a processing device or a structural element being arranged in the hole, which processing device or structural element is formed so as to have an electrically conductive body and an upper portion of which extends out of the hole. According to the invention, a first transmitting and/or receiving unit is arranged in the hole, a second transmitting and/or receiving unit is arranged outside of the hole, and the transmitting and/or receiving units are designed to transmit and/or receive a high-frequency signal, which is transferred by means of the electrically conductive body of the processing device or of the structural element.
