Abstract (en)

[origin: WO2020114881A1] One aspect of the invention relates to a door (5) for a domestic appliance (1), having a strip-like panel (7) which is arranged to cover at least the interstice (40, 41, 42, 43) between door panes (10, 37, 38, 39) from above, and having at least one door profile (8, 9) which is arranged on a door pane (10, 37, 38, 39), wherein the panel (7) has a first bearing element (15) and a second bearing element (19), wherein a mechanical tilting device (55) is formed by the bearing elements (15, 19) and the bearing parts (16, 20) thereof, with which tilting device the panel (7) is pressed towards a facing inner side (11) of a door pane (10) in a defined manner about an axis parallel to the longitudinal axis (A) of the panel relative to the door profile (8, 9). Another aspect of the invention relates to a method for mounting a panel (7) on a door (5) of a domestic appliance (1). A further aspect of the invention relates to a domestic appliance (1).
